Mobility, Independence, Injury Prevention Sports injuries, stroke, back pain, poor balance, accidents and diseases such as arthritis, MS and COPD can cause pain and reduce your mobility. As primary health care professionals, we specialize in diagnosing and treating illness, injury, pain and disabilities that prevent you from moving and living an active life. We work with you to improve your mobility and independence. We provide hands-on therapy, acupuncture, personalized therapeutic exercises, pain management and education to help you gain control over your condition. Our goal is to restore, maintain and maximize your strength, function, movement and overall well-being. It's about quality of life—your life. We're here to help.
